RESPONSE TO OFFICE ACTION

Dear Sir:

Please amend the above application as follows:

The examiner cites the '796 patent but fails to recognize that this patent discloses a gas pressure microsensor wherein gas pressure in the microcavity 24 within the membrane 20 is sensed. In contrast to the examiner's allegation, the bowed membrane 20 of the '796 patent is formed by epitaxially growing a p-GaN layer 12 and etching an underlying n-GaN base layer 13 in much the same manner as the deficient '730 patent.

The layers 26a, 26b of the '796 patent form a piezoelectric strain sensor on the membrane 20. There is no disclosure whatsoever in the '796 patent of Applicants' method of claim 27 involving heating a membrane to impart an arcuate shape thereto, depositing one more metallic layers on the heated membrane, and cooling the membrane to ambient temperature, the membrane being constrained by the one or more metallic layers in an arcuate shape.

Neither the '730 patent nor the '796 patent alone or together suggest Applicants' claim 27.

Reconsideration of the rejection of claims 18, 20, 26, and 27 is requested.

Applicants have added new claim 28 which is believed to be allowable as well. The Commissioner is authorized to charge the fee for new claim 28 to my deposit account No. 20-1124.

USSN 10/723,307

Applicants believe the pending claims are in condition for allowance, and action to that end is requested.

Respectfully submitted,

Edward J. Timmer
